

REKEYABLE HIDDEN SHACKLE PADLOCKS

American Lock's round, heavy-duty, hidden shackle padlocks are the toughest padlocks of their type ever offered to security professionals. Our industrial-strength padlocks are rekeyable and have a replaceable cylinder and shackle.

- Padlocks offer maximum protection against drilling, sawing, prying, crowbars, dent pullers and hammers
- Six-pin tumbler cylinders provide superior pick resistance, with tens of thousands of key changes
- Ideal for high security areas and are adaptable for applications on garages, storage buildings, vehicles, commercial buildings, industrial plants and vending machines
- The three flat back locks, models A2500, A2010 and A2001, are tapped and threaded to attach to either high security hasp A801 or A802, featured on page 25. When affixed, for swing door applications, the combination provides both maximum security by making it virtually impossible to pry the lock away from the hasp and greater convenience, as the lock remains attached to the hasp when unlocked
- Choose bundle packs that combine the lock with patent-pending high security hasps for greater convenience and physical security—defying bolt cutters and prying

A2500

This rekeyable, flat back hidden shackle padlock offers a hardened steel body and a convenient front access keyway, anti-drill cylinder cover plate and easy-to-use spring loaded shackle. Precision machined from high quality solid steel bar and triple plated for superior rust resistance, it exceeds the highest performing grade level (Grade 6) within the American Society for Testing Materials (ASTM) Padlock Standard (F883).

A2500

A2500LHC1

A2000

A800LHC

A2500LHC1

This bundle pack combines our toughest lock, the solid steel A2500, attached to high security hasp A801. This combination offers maximum security for swing door applications.

A2000

This hidden shackle, stepped back padlock has a die cast body reinforced with anti-saw pins. It will lock any of the high security hasps shown on page 24.

A800LHC

This model combines the A2000 stepped back die cast lock with the A800 cast steel hasp.

A2010

This lock is precision machined from high quality solid steel bar and triple plated for superior rust resistance. For maximum security, this lock features a flat back design so it can be fastened to the high security hasps, A801 and A802, featured on page 24.

A2010

A2001

This hidden shackle padlock has a die cast, flat back body reinforced with anti-saw pins. It can be attached to high security hasps A801 and A802 featured on page 24.

A2001

A801LHC

In this bundle pack, the die cast A2001 padlock is pre-attached to the A801 truck hasp, offering greater security in swing door applications.

A801LHC

A802LHC

This lock and hasp combination attaches the strong die cast A2001 padlock to the A802 trailer hasp, ideal for securing overlapping doors with a raised lip or seal.

A802LHC
